I would like to know what Ubuntu pre installed apps and why it is that they are not in the Ubuntu Software Center. My first reaction was "Why are you installing Ubuntu from the Ubuntu Software Center?" Hi George, Thank you for the feedback. Ubuntu Software Center is a universal center for all the application/package available for Ubuntu operating system. Some of the apps/packages are downloaded directly from the official repository of Ubuntu. Other apps/packages are downloaded directly from the developer or the third party. But, those pre-installed apps/packages, if it requires any additional software, then it must be installed separately using Software Center or Terminal. Operating Systems Partitioner is a simple yet powerful tool that helps you create, edit, and delete partitions of Windows and Linux. It also allows you to operate with hard disk partitions, CD and DVD, floppy disks, as well as USB flash drives. You can safely resize partitions, move files between partitions, even clean up your hard disk by removing temporary files and folders. What's more, if your partitions are encrypted, you can use this tool to decrypt them. It's the first and only tool that lets you do all of this. Can be used to easily create, modify, delete partitions of Windows and Linux For example, with only one click you can create your first partition and format it in the most suitable way for your operating system (including assigning the label as you want it). It's like having a built-in tool for partition management. Once you've created the partitions, you can move files between them, or between any of the partitions and your Windows installation. And if you're having hard time working with your disks, operating systems, or BIOS, you can easily access all that information with the help of the application's Help section. You can resize the partitions of Windows and Linux And if you need to increase or decrease the size of your Windows and Linux partitions, this tool can be the one to turn to. It's a very simple matter to move your files to a new partition. Just like that. And as soon as you boot your operating system, you'll be able to use all the benefits. For example, you can easily mount the partition and then access all your files. If you have any data stored in it, you can easily save it or send it. And you don't have to worry about the formatting of your partition. WinToLinux will do all of this for you. Add a second operating system to your system You don't even have to limit yourself to Linux, because WinToLinux allows you to create and mount partitions of other operating systems.
